Don’t Overload Outlets
By: Teighton Clark

Hey! All you girls reading this, I want to send you a very important message. It’s okay to want to curl your hair and dry it and straighten it and charge your phone and all those things you want to do with electricity and outlets, but you can’t do all those things at the same time. If you do I warned you, and don’t say I didn’t. Electricity can be very dangerous, and when you use it the wrong way very bad things can happen.

Unless you want to start a fire I wouldn’t overload an outlet. You can look pretty and be safe with electricity too. Just because the new cute boy, Chad, at the power plant thinks pretty girls are amazing, that doesn’t mean dead-because-of-fire girls are too.

Water and Electricity Don’t Mix

You know sometimes when you’re taking a bath or a shower and listening to music your phone’s charging and everything’s going fine when all of the sudden, a Justin Bieber song comes on. You’re like “Argghhhhhhh. Why does the radio hate me?” You go to turn off the radio and… ZAP ZAP ZAP, you get electrocuted. You can try to remember the following steps

1. Never use an electrical appliance near water
2. Never touch anything electrical with wet hands
3. Never leave an electrical appliance where it can fall into water while taking a bath or shower
4. Never leave a dangerous electrical appliance around children
5. Don’t use extension cords in wet areas like swimming pools or any water source not in your body
It’s best to be safe around electricity and water.

This is my safety message
